Professional Summary

Staff-level QA Automation and Backend Services leader with 11+ years of experience in API, UI, backend, and data-platform quality engineering. Proven success in owning quality for Integrator.io services (FMS, RMS, Streaming), eliminating manual validation through automation, and driving delivery improvements across multiple scrum teams using shift-left and AI-assisted execution models.

Core Skills

- API, backend, and integration testing (functional, regression, end-to-end)
- QA lifecycle ownership: analysis, design, peer review, execution, sign-off
- Shift-left quality strategy and release readiness governance
- AI-assisted QA workflows: Cursor, Claude, Sonnet
- Prompt engineering for test and automation generation
- CDC and streaming validation: MongoDB, MySQL, PostgreSQL, SQL Server
- CI/CD orchestration: Jenkins, GitHub, pipeline failure triage
- Observability and debugging: Splunk logs, environment issue triage
- Tools: Python, Pytest, Selenium, Cypress, Appium, SQL, Jira, ADO, Linux

Professional Experience

Senior AI Software Engineer | S&P Global, Hyderabad

May 2019 - Present

Integrator.io - Staff QA Automation and Backend Services Ownership

- Own quality delivery for FMS, RMS, and Streaming services across backend, API, and UI.
- Lead complete QA lifecycle: requirement analysis, design, peer review, execution planning, and release sign-off.
- Eliminated manual validation for key functional and regression coverage by developing automation-first workflows.
- Manage QA execution for 3 scrum teams aligned to API and backend development streams.
- Coordinate with development teams to run local automation before PR merges, improving early defect detection.

Integration and Flow Validation Responsibilities

- Validate Integrator.io source-to-destination synchronization behavior across export, import, and flow patterns.
- Verify endpoint integrations with secure authentication models and monitor end-to-end behavior through Splunk logs.
- Observe and validate trigger-based and platform-initiated flows for reliability and execution correctness.

Streaming and CDC Program Delivery

- Delivered end-to-end QA for CDC enablement across connector ecosystem.
- Implemented CDC automation for MongoDB, MySQL, PostgreSQL, and SQL Server connectors.
- Developed CDC automation suites by understanding and extending existing frameworks through Cursor-assisted workflows.

AI-Driven Automation and Governance

- Analyze agent logs and guide script generation to reduce hallucination-prone automation outputs.
- Use prompt engineering to improve reliability of generated test cases and automation scripts.
- Run and validate automated suites across local, on-demand, QA, and staging environments.
- Integrated MCP servers (Jira, GitHub, Snowflake, Playwright) with Cursor workflows to accelerate automation execution and reporting.
- Partner with AI teams to share feedback and improvements for AI testing tools and script generation quality.

Scrum, CI/CD, and Quality Improvements

- Drive shift-left practices to start validation before QA-environment deployment windows.
- Own multiple regression suites for core, UI, API, and backend scrum teams based on release requests.
- Maintain automation script health across environments and resolve instability quickly.
- Manage automation repositories in GitHub and execute suites through Jenkins pipelines.
- Debug failed CI pipelines and stabilize regression execution for consistent sprint delivery.
- Provide frequent status, risk, and quality updates to stakeholders and leadership.

Additional Contributions at S&P Global

- Improved pipeline data quality and validation outcomes for market intelligence data workflows.
- Automated SQL validation processes to reduce cycle time and improve release confidence.
- Built reusable API, backend, and data validation assets used across teams.
- Contributed to migration and framework enhancements in Python, Java, and Cypress ecosystems.

SDET I / Quality Analyst | Vitech Systems Asia Pvt Ltd, Hyderabad

Jul 2017 - Apr 2019

- Developed and executed UI/API automation using Selenium and TestNG for insurance and retirement products.
- Built and enhanced framework-level capabilities, including Jira-linked automation and reusable keywords.
- Delivered high-volume automation coverage and accelerated regression cycles in distributed test environments.
- Supported sprint ceremonies, release validations, issue triage, and stakeholder reporting.

Quality Assurance Engineer | Inteq Software Pvt Ltd, Hyderabad

Oct 2014 - Jul 2017

- Performed functional, regression, UAT, API, database, and Windows application testing for healthcare products.
- Developed Selenium/TestNG automation and maintained data-driven and keyword-driven frameworks.
- Validated SQL/SSIS changes and provided release-quality reports for informed go/no-go decisions.

Certifications and Professional Development

- AI-assisted QA Automation (hands-on practice with Cursor, Claude, Sonnet workflows)
- Agile/SAFe/Kanban Scrum delivery execution across multi-team programs
- ISTQB Certified Tester Foundation Level (CTFL) - ISTQB
- ISTQB Test Automation Engineer (TAE) - ISTQB
